

The Missing Layer in Enterprise AI: Context

Tabnine provides the context enterprises need to make AI reliable, safe, and effective—through our AI Coding Suite or the standalone Enterprise Context Engine.

Loved by millions of developers

Organizational Intelligence for Agentic Systems

Tabnine provides the context layer that makes AI reliable in the enterprise. Our AI Coding Platform brings that context into the developer workflow, and the Enterprise Context Engine makes it available to any agent or tool—across preferred models, IDEs, and deployment environments.

Gartner. Tabnine named a Visionary in the September 2025 Gartner® Magic Quadrant™ for AI Code Assistants. [Read the report.](#)

Enterprise Context for Smarter Agents

Tabnine's Enterprise Context Engine is what makes AI coding truly enterprise-ready. Instead of guessing from generic training data, it learns your organization's unique architecture, frameworks, and coding standards. It adapts to your mixed stacks and legacy systems, ensuring every suggestion aligns with your security, compliance, and performance requirements. By embedding enterprise knowledge directly into the coding experience, Tabnine transforms AI from a novelty into a governed, context-aware teammate that codes the way your enterprise works.

Tabnine is the original AI coding assistant trusted by millions of developers and thousands of companies

- //The product is stable and mature, works well out of the box and integrates well with the codebase - it offers both the possibility to connect external repositories for code indexing that is later offered as suggestions when working with the product, as well as the possibility to feed specific files, functions, properties, etc. into the chat you are using right now for enhanced context awareness when generating an answer.//

Gartner Peer Insights { }

- //It's unmatched in trustworthiness and enterprise readiness. I appreciate its intelligent code completion that suggests single tokens or multi-line blocks based on the project context, and I love the personalized suggestions that learn my coding style, variable naming, and architectural patterns over time.//

G2 { }

- //We've been working with the team at Tabnine for a little over a year now through implementation and ongoing onboarding throughout our engineering organization. Throughout the experience, the team at Tabnine has been responsive and proactive in working with us through the process.//
